LEOSTREAM QUICKSTART SERVICE

ACCELERATE YOUR LEOSTREAM DEPLOYMENT

The Leostream Quickstart Service is designed to streamline the deployment and configuration of your Leostream environment. A Scale Computing Engineer will assist you remotely with the installation and configuration of the Leostream Gateway and Broker machines essential for your deployment. This includes assistance with licensing your Leostream Broker machine, installing the Leostream Agent on a Golden Image, configuring pools, and other necessary Leostraeam settings. A detailed walkthrough on how to install the Leostream agent on physical or virtual desktops and adjust Windows settings will also be provided. Please note that licenses are not included with the Leostream Quickstart service.

What's Included?	Delivery	Details
Planning • Upload a valid RHEL 8 ISO to the cluster and create two VMs for the Quickstart service: one for the Connection Broker and one for the Gateway • Set up a Windows VM ready to be used as the Golden Image VM • Download Leostream Connection Broker RPM, Gateway, Agent files and move to necessary VMs • Ensure that a valid private IP is available for both the Connection Broker and the Gateway (DHCP can be used as well)	Remote Call	Language English Only Scheduling Monday-Friday 2AM-10PM EDST
Quickstart • Install, license, and configure the Connection Broker • Install and configure the Gateway • Set up necessary connections between the Connection Broker and the Gateway • Set up basic RDP Protocol Plan, Power Control Plan, Release Plan, and basic policy that contains these plans • Assign this policy to a user • Install Leostream Agent on the golden image	Remote Call	

What's Included?	Delivery	Details
Verify Remote Access • Verify remote access of the deployed physical or virtual machine, and address any remaining questions regarding the service or deployment	Remote Call	Language English Only Scheduling Monday-Friday 2AM-10PM EDST
