SC//MOVE QUICKSTART SERVICE

MIGRATE WORKLOADS WITH MINIMAL DOWNTIME

Our most commonly asked question about Scale Computing Platform might be, "How do I move my workloads into the Scale Computing HyperCore environment?" There are a number of migration products and services on the market, but none is simpler or more tailored to SC//HyperCore than our SC//Move Quickstart Service.

Our Scale Computing Move Powered by Carbonite software solution migrates workloads with minimal downtime from any physical, virtual, or cloud platform onto the SC//HyperCore system. The SC//Move Quickstart Service provides training in using SC//Move to migrate one workload to SC//HyperCore.

The SC//Move Quickstart Service migrates one Windows or Linux physical or virtual workload into a virtual machine running on SC//HyperCore. It is a kickstart for you as you plan to migrate all other servers to SC//HyperCore and want to ensure you understand how to use SC//Move software successfully.

What's Included?	Delivery	Details
Planning • Initial discovery and migration planning • Request at least one Scale Computing Move License 24 hours prior to the SC//Move Quickstart Service	Email	Language English Only
